

YAMAMOTO
Appl. No. 10/535,495
November 18, 2009

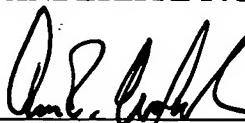

From this evidence it will be quite apparent that the compositions representative of the Chiddick et al reference would not provide sliding members that would maintain a coefficient of friction of not more than 0.100. Quite the contrary – the compositions of Chiddick would be unsuitable when compared under the same circumstances.

Reconsideration and favorable action are solicited.

Respectfully submitted,

NIXON & VANDERHYE P.C.
